

ABSTRACT

A data transmitting apparatus and a data receiving apparatus, which are capable of retransmitting a packet even when a
5 retransmission request is made by a client after transmitting a session close notice packet to the client. A session is closed by a session closing means 105 when a predetermined period of time has passed after transmitting the session close notice packet, which is generated by a control command generating means
10 102 as the session close notice packet, from a packet transmitting means 103 to the client.
